(54) Title: USER RECOGNITION SYSTEM FOR AUTOMATICALLY CONTROLLING ACCESSSES, APPARATUSSES AND THE LIKE EQUIPMENT

(57) Abstract: A user recognition system for automatic managing of accesses, the use of equipment, handling of goods or enjoying of services, including at least one central processor (2, 15), at least one peripheral unit (4, 11) with at least one detecting device (12) for detecting biometric data relating to the physical characteristic features identifying a user, wherein each peripheral unit (4, 11) is connected through at least one interface unit (5, 17) to said central processor (2, 15) by means of a communication network, and that each peripheral unit (4, 11) have at least one electronic card (14) suitable for permitting two-way transmission of biometric data acquired from said detection means (12) to said central processor (2, 15), through at least one interface unit (5, 17) acting as a network card and interface between a port (19) of said central processor (2, 15) and said communication network.
